Activation Code: An example of a software package in the BADD-GATE methodology

AutoCAD is an example of a BADD-GATE software product in the following sense. The A-Gate ('Autodesk') company (founded in 1995) was a GATE (generic application for the architecture and design domain) vendor until the end of 2009. After the GATE (which stands for 'generic application for the architectural domain') project had been cancelled, A-Gate started looking into the potential of the BADD-GATE model. In 2007, A-Gate started the BADD project. The

AutoCAD software product can be characterized as BADD-GATE, although in some cases A-Gate has made calls on CAD standards, and provided an API (Application Programming Interface) that it can link against. The BADD-GATE model has been promoted by the present CEO of A-Gate, who is also a lead researcher of the BADD project. However, the model and the AutoCAD software are not developed at A-Gate. The AutoCAD software has been developed in collaboration with other partners. Autodesk's sales people are responsible for the Autodesk GIS product (i.e. AutoCAD), which is the most successful BADD-GATE solution. GIS is an abbreviation for 'geospatial'. There are several aspects to the BADD-GATE product strategy: 1. On the software side: using GIS and CAD as a unique 'geo-spatial' CAD solution 2. On the "designware" side: using the CAD data to produce a new class of CAD software products and classes of products 3. On the "add-on" side: use of a CAD standard, which is then used for add-on production See also List of computer-aided design software Comparison of CAD editors for CAE
