FIFA is the one and only complete football (soccer) video game. Based on EA's FIFA brand, this seminal sport franchise has sold over 200 million copies globally since its launch on the Sony PlayStation® in September, 1996, making it the best-selling sports videogame in the world and the most played sports videogame in the history of videogames. FIFA offers an immersive world in which players become part of the football experience through player personalities, distinct club and national teams, and all-new gameplay innovations. Player Movement FIFA 22 brings the game even closer to the real thing. Uniquely positioned on pitch surface, the player is free to choose their trajectory. Movement is the most important part of FIFA, but this time it is even more crucial. Players no longer have to worry about aiming inaccurately, a sluggish first touch, or them clumsily collecting the ball as it comes to them. We worked hard on this feature and hope you play it again and again. FIFA also enhances ball control in the air. Players can now release the ball earlier and higher, immediately improving both their finishing and passing options. Players have far more control over their movement in all directions. Players still adjust themselves on the ball, but this is now more responsive and fluid. They also feel powerful and confident using all their different attributes and skills to make the most of every situation on the pitch. Shooting Low-flying shots have been a long-standing issue in the title. With FIFA 22, the game has evolved to put the player in complete control with every shot. The shooter now tracks the ball closely from the moment of release, expanding out and even dipping into the goalkeeper's line. This means that with every shot, the shooter is confident of a more accurate aim and precision. More importantly, it allows players to dictate the height and power of their shots and, therefore, the game dynamics. Individuals can now judge their options better to either power or finesse a shot. With increased accuracy, players can now create chances more reliably and is probably the main reason for the changes. The player is now in complete control of every shot, making controlling shots feel effortless. The console also adds the first-ever reflection tracker. Additionally, players can now call into all kinds of situations where they would previously be cautious. FIFA 22 also brings a new goalkeeper behaviour to the game.
