Autoradiographic assay of gamma-hydroxybutyric acid in the brain of the rat. Substrate autoradiography and thin layer chromatography (TLC) were compared for their abilities to localize gamma-hydroxybutyric acid (GHB) in the brain of the rat. Autoradiograms obtained by incubating fixed brain sections with [3H]GHB showed, in a similar way to TLC autoradiograms, a clear pattern of labelling, which, being moderate in the cerebellum and absent in the diencephalon and most regions of the brainstem and telencephalon, was intensified in the hippocampus, piriform and occipital cortices, lateral septum, caudate nucleus, amygdala and dentate gyrus. On the other hand, autoradiograms of fixed brain sections incubated with [3H]alpha-methyl-gamma-hydroxybutyric acid and [3H]beta-hydroxybutyric acid were not as intense and were restricted to the cerebellum, mainly the molecular layer, and to the nerve cells of the white matter. TLC autoradiograms of brain sections from rats injected with [3H]GHB revealed [3H]GHB in the same structures and at the same levels as those observed in the [3H]GHB autoradiograms. These results showed that the autoradiographic technique was more efficient in detecting the distribution of [3H]GHB than TLC.Q: Why can a pointer to a struct point to a member of the struct? When I try to access a member of a struct
